IQMS User Letter 70 - Guidelines for Complaint Entry and Processing: Minimum Requirements, insufficient Information and Procedures

Version: 2.0
Effective Date: 2025-09-07
Applicable to: GBS/CQU

1. Minimum Requirements for complaint entry & processing

Following cases are out of scope of GSOP 115 and do not require entry in IQMS.

- General statements on Bayer products that are not related to a Product Technical Complaint or Falsification & Counterfeit incident.
- Usability issues (Customer Satisfaction Issues and User Errors) for drug products, cosmetics, and food supplements. Usability issues for Medical Devices and Combination Products (device part is affected) follow GSOP 115 and are processed in IQMS.
- Relevant product information is missing, such as brand names, configuration (presentation & strength) and the reporter cannot be contacted.

2. Handling of complaints for products manufactured by multiple manufacturers but the respective site is unknown

In cases of PTC or suspected falsification or counterfeit incidents, where only basic product information is available (e.g., brand name) for products manufactured at more than one site, perform and document up to three attempts to retrieve additional information in your local system if available e.g. Engage. If no additional information is received no further actions are needed. If additional information is received allowing for the identification of site & product enter the case in IQMS and send it for investigation.

If no local system exists enter the cases in IQMS with a dummy manufacturing site and a high-level product name document the attempts to retrieve addition information in IQMS. If no additional information is received perform local closure. If additional information is received allowing for the identification of site & product enter the case in IQMS and send it for investigation.

Note: PTC+AE cases are out of scope of this user letter. These cases need to be processed in IQMS in accordance with GSOP 115.

General notes:

1) Use a dummy manufacturing site: Unknown Manufacturing Site
2) Prior to creating a high-level product name, verify its availability in the system using the search functionality. For most products in question a high-level product name is created, see Table 1. If a new high-level product name needs to be created, please ensure to enter a value in the following fields:
    - Material Number
    - Material Short Description
    - Text Product Hierarchy level 1-4
3) Adjust the site and product in IQMS based on any additional information received before finalizing the initiated state.

INTERNAL

Table 1: Examples of high-level product name

Material Number	Material Short Description	Text Product Hierarchy level 1-4
Unknown Afrin	Unknown Afrin	Afrin
Unknown Alka-Seltzer	Unknown Alka-Seltzer	ALKA-SELTZER
Unknown Astepro	Unknown Astepro	Astepro
Unknown Citracal	Unknown Citracal	CITRACAL
Unknown Claritin	Unknown Claritin	Claritin Family
Unknown Iberogast	Unknown Iberogast	Iberogast
Unknown MiraLAX	Unknown MiraLAX	MiraLAX - RestoraLAX
Unknown Lotrimin	Unknown Lotrimin	Lotrimin
Unknown Midol	Unknown Midol	MIDOL
Unknown One a Day	Unknown One a Day	ONE-A-DAY
Unknown Sanatogen	Unknown Sanatogen	SANATOGEN

3. Processing of complaints without sufficient information

For complaints where batch number and photos are not available at data entry, but the customer agrees to keep the sample for 30 days, the complaint can remain in the Initiated state until sufficient information that allows an investigation by the RQU (batch number or relevant photos) becomes available. Once this information is received, the awareness date can be updated to reflect the date when the necessary details became available, and a comment should be included in the communication protocol.
